Getting Started with PHP 8

January 23, 2026 245 views 2 comments

PHP 8 brings many exciting features that make development faster and more enjoyable. In this post, we will explore the key features you should know.

Named Arguments

Named arguments allow you to pass values to a function by specifying the parameter name. This makes your code more readable.

Attributes

Attributes provide a way to add metadata to classes, methods, and properties without using docblocks.

Union Types

You can now declare that a parameter or return type can be one of several types.

These are just a few of the many improvements in PHP 8. Stay tuned for more tutorials!
